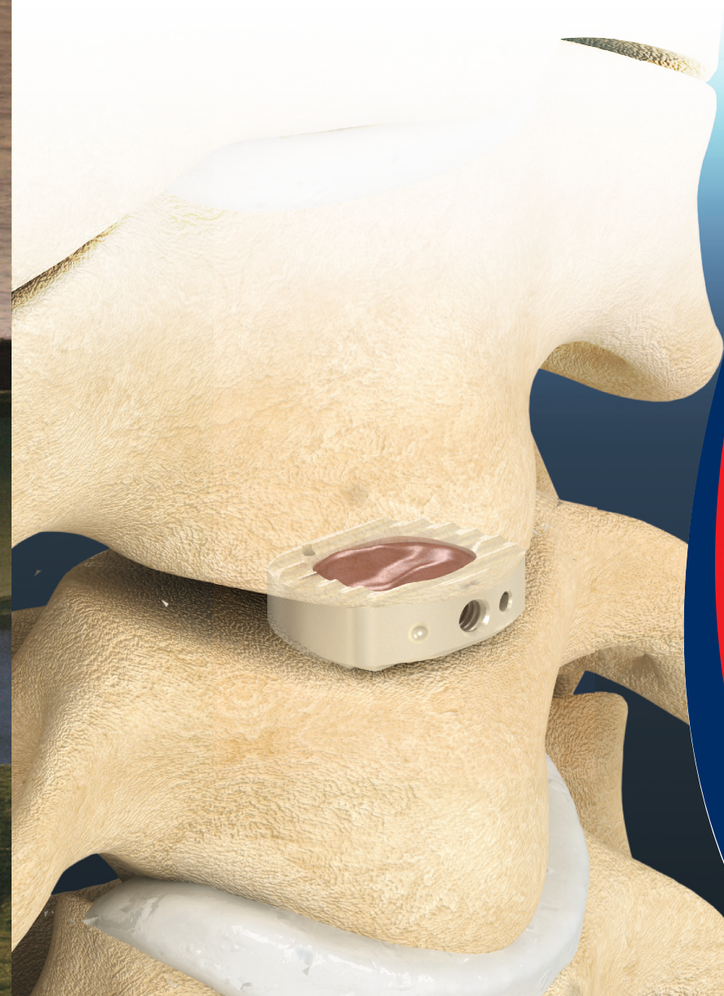
4CIS® Marlin

Cervical PEEK Cage

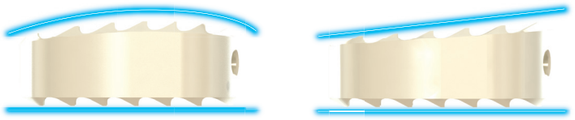


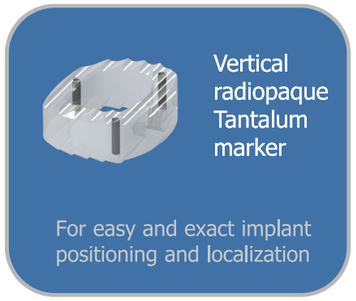
OVERVIEW

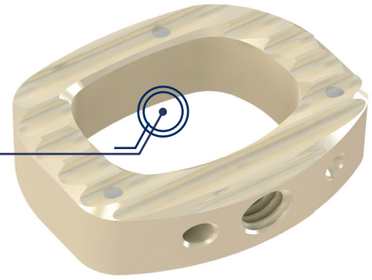
4CIS® Marlin Cervical PEEK Cage System is indicated for use in cervical intervertebral body fusion procedures in skeletally mature patients with degenerative disc disease (DDD) at the levels from the C2-C3 disc to the C7-T1 disc. DDD is defined as neck pain of discogenic origin with degeneration of the disc confirmed by patient history and radiographic studies. These patients should have six weeks of non-operative therapy in advance. The 4CIS® Marlin ACIF Cage System is to be used with autogenous bone graft and/or allogenic bone graft comprised of cancellous and/or corticocancellous bone graft, and is to be implanted via an open, anterior approach. It is intended to be used with supplemental spinal fixation systems that have been cleared for use in the cervical spine, such as Anterior Cervical Plate system.

FEATURES & BENEFITS

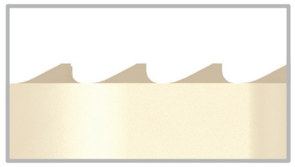
Anatomical Shape
for an exact implant fit







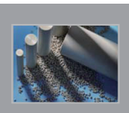
Graft Window
Optimized ratio between contact area and opening

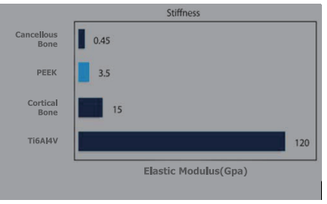


Serrated Profile
for high primary stability

PEEK (Poly-Ether-Ether-Ketone) Properties

- Biocompatibility
- Radiolucency
- PEEK cage are more than simple spacers permitting vascularization between vertebral endplates, they mediate physiological loading of the bone graft. Its elasticity close to that of cancellous and cortical bone, insures an optimal mechanical behavior contributing to successful fusion.





ORDERING INFORMATION

4CIS® *Marlin* CERVICAL PEEK CAGE (NON-STERILIZED)
